

# *Inside PixInsight - Second Edition*

## Post-Publication Amendments

---

- On page 260 in Chapter 20, the correct path to enable printing was the victim of editing. It should read `C:\Program Files\PixInsight\bin\ PixInsight.exe" --with-printer`
- Bundled Projects was introduced after completion of the second edition and simply writes one file (.pxiproject), rather than two (.xosm/.data).
- The PSFImage script by Hartmut Bornemann can speed up Deconvolution tasks considerably and was introduced after completion of the second edition.
- A new feature of BPP, added after completion of the second edition, allows the use of both light darks, as well as flat darks. This may be useful of some CMOS-based cameras that can't take usable bias frames.
